#### **DETAILED ACTION**

## Response to Arguments

- 1. Applicant's arguments filed 02/27/2004 have been fully considered but they are not persuasive. Please see the following reasons and the new grounds of rejection below.
- 2. The applicant argues "Girerd is not seen to disclose that the sensor displayed on the map represents the information generating terminal and a URL for accessing the ...terminal" (page 8, paragraph 2). The argument is not persuasive because Girerd et al. (USPN 6,131,067) does teach that the icon is a representation of the information generating terminal in column 5, lines 33-37. In column 6, lines 9-19, Girerd et al. (USPN 6,131,067) teaches means for accessing the information via the user interface. Further, please note that the Girerd et al. (USPN 6,131,067) reference is not relied upon to teach the use of a URL for accessing the information from the map display.
- 3. All further arguments are most in view of the new grounds of rejection presented below.

### Claim Rejections - 35 USC § 103

- 4. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 5. Claims 48, 51, 54, and 55 are rejected under 35 U.S.C. 103(a) as being unpatentable over Girerd et al. (USPN 6,131,067) in view of Phelan et al. (WO 97/07467).

Art Unit: 2153

6. Regarding claims 48 and 51, Girerd et al. (USPN 6,131,067) teach a system to output information of an information generating terminal to an output terminal via a network comprising:

- a. A communication device adapted to receive position status information of the information generating terminal, to update position information of the information generating terminal in accordance with the received position status information, and to transmit geographic map information in accordance with the position information to an output terminal (column 5, lines 33-37; column 5, line 64 column 6, line 16; figure 6, element 308).
- b. A search device adapted to search position information in accordance with a request by the output terminal (column 5, lines 26-37).
- c. A display information generating device adapted to generate display information as the geographic map information, the display information including a map corresponding to the position information searched and an icon to be displayed on the geographic map, the icon representing the information generating terminal (column 5, lines 34-37; column 5, line 65 column 6, line 10).
- d. Wherein, the communication device transmits the geographic map information to the output terminal in response to the request from the output terminal (column 5, lines 26-37; column 5, line 65 – column 6, line 10).
- e. Wherein the output terminal displays a geographic map with the icon representing the information generating terminal, and the output terminal

Art Unit: 2153

accesses the information generating terminal (column 5, lines 26-37; column 5, line 65 - column 6, line 10; column 6, lines 9-19).

Although the system disclosed by Girerd et al. (USPN 6,131,067) shows substantial features of the claimed invention, it fails to disclose means wherein:

- a. A database is used for storing position information and providing information to the output terminal.
- b. A Uniform Resource Locator (URL) associated with the icon is used to access information.

Nonetheless, these features are well known in the art and it would have been an obvious modification of the system disclosed by Girerd et al. (USPN 6,131,067), as evidenced by Phelan et al. (WO 97/07467).

In an analogous art, Phelan et al. (WO 97/07467) discloses a system for geographic location of entities via a network with means wherein:

- a. A database is used for storing position information and providing information to the output terminal (page 5, lines 5-24; page 15, lines 22-24).
- b. A Uniform Resource Locator (URL) associated with the icon is used to access information (page 8, lines 28-31).

Given the teaching of Phelan et al. (WO 97/07467), a person having ordinary skill in the art would have readily recognized the desirability and advantages of modifying Girerd et al. (USPN 6,131,067) by employing the use of a database for storing information and a URL for retrieving. This benefits the system by allowing information to be stored in a logical manner

Art Unit: 2153

than is easily accessed and updated. Further, the use of URLs allows the implementation to be platform independent.

- 7. Regarding claim 54, Girerd et al. (USPN 6,131,067) teach all the limitations as applied to claim 48. They further teach means wherein the display information is transmitted to the output terminal with GET method of HTTP by the communication device (column 5, lines 42-43; column 6, lines 9-19).
- 8. Regarding claim 55, Girerd et al. (USPN 6,131,067) teach all the limitations as applied to claim 51. They further teach means wherein the generated display information is transmitted to the output terminal with GET method of HTTP (column 5, lines 42-43; column 6, lines 9-19).

#### Conclusion

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Kevin Parton whose telephone number is (703)306-0543. The examiner can normally be reached on M-F 8:00AM - 4:30PM.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Glenton Burgess can be reached on (703)305-4792. The fax phone number for the organization where this application or proceeding is assigned is 703-872-9306.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
